Fixes:

1. Configuration Wizard: 'Trunk Manager' name changed to 'SIP Trunk Manager'.
2. Telephony→Inbound Control→Call Queue: Correction of inconsistency between Queue Ring Strategy description information and the option.
3. Telephony→Outbound Control→Trunks: Fix the issue that the dialing permission was lost after the IAX trunk was turned off and on again.
4. Telephony→Outbound Control→Trunks: When adding a SIP Trunk, the sendpai parameter will be set as disabled by default.
5. Telephony→Outbound Control→Trunks: Fix the issue of obtaining digital trunk dialing permission parameters.
6. Telephony→Outbound Control→Dial Rules: Fix the trunk sorting priority issue.
7. Telephony→Outbound Control→Dial Permission: Fix the Dial Rules priority issue.
8. Telephony→Advanced Features→Wake Up Call: Fix the issue that the wake-up call records were not deleted when the call was not connected.
9. Telephony→Feature Codes: Fix the issue that the modification of *1 One touch recording was invalid.
10. Reports→Records: Fix the issue that the recordings of extensions in departments or queues could not be displayed on the web.
11. Addons→Exbox→Settings: The Network Interface display is changed to display both WAN and LAN.
12. System→Network→Network Profiles: In WAN settings, fix the issue that the network cannot be started without the gateway parameter.
13. Fix the API Query Report parameter, call and call recording API parameters won't need to pass the 'page' parameters and other unnecessary parameters.
14. Fix the issue that the call log and recording may not be displayed for analog outbound calls.
15. Fix the issue that the email address could not be saved on the extension user page.
16. Fix the issue of the message errors in operating voice messages on the extension user web.
